

KZONG MACHINERY

Quality System & Compliance Summary

How our quality system works, what is inspected, and how to obtain verified copies for tender submissions.

Quality management

Every unit is inspected against a documented checklist before packing: dimensional accuracy of fabricated parts, pressure and leakage testing of hydraulic assemblies, electrical safety checks and a loaded running test at rated capacity. Inspection records travel with the machine and are available to the buyer.

Inspection points in the production flow

Stage	What is checked and recorded
Incoming material	Mill certificates retained per production batch
Fabrication	Weld and dimensional checks against the drawing revision
Hydraulic assembly	Pressure and leakage test report per unit
Electrical assembly	Insulation resistance, continuity and function test
Final test	Loaded running test at rated capacity before packing
Packing	Sea-worthy packing check and container loading plan

Certifications held

Title	Issuer / status
ISO 9001 Quality Management System	Accredited certification body - Current
ISO 14001 Environmental Management System	Accredited certification body - Current
CE Conformity for EU-bound Machinery	Notified body / self-declaration - Current
Third-Party Factory Audit	SGS / BV authorised inspection - On request
Independent Pre-Shipment Inspection	Buyer-appointed agency - On request
Registered Utility Model and Design Patents	China National Intellectual Property Administration - Multiple

Third-party and buyer inspection

Buyer-nominated inspection is welcome. If you want your own inspector or a third-party agency present for the running test, tell us during order confirmation and we will schedule the machine accordingly. Inspection records,

test reports and material certificates are issued with the machine and are available to the buyer.

Requesting verified copies

Current copies of our certificates and quality documentation are supplied on request, including for tender submissions. Contact our export team with the document list you need and the name of the entity the documents should be addressed to.
